How to Cope:

In the aftermath of a disaster, it's vital to anticipate and adapt to potentially limited resources, such as workspace, staff, equipment, power, key vendors, network access, and data. To ensure the continuity of our critical functions, answer the How to Cope section in your Business Continuity Plan. For each critical function you can answer a series of questions to get the process started on visualizing the practical needs of setting up your department after a disaster.
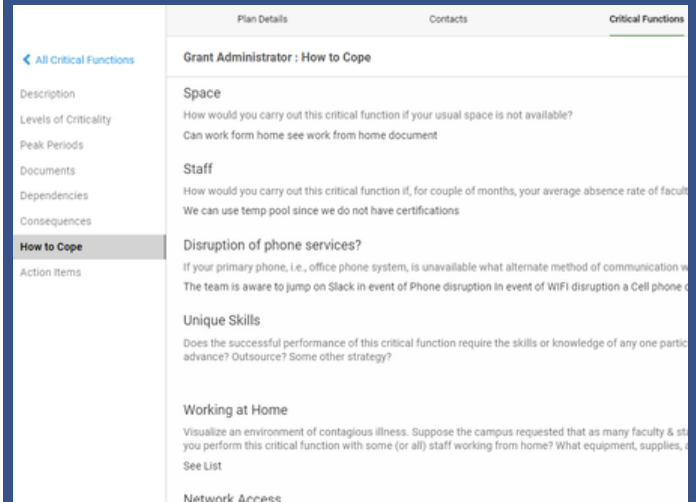

By proactively addressing these considerations and exploring all available options, we can enhance our ability to cope with unexpected challenges and maintain the continuity of our critical functions.

Tip of the Month

Under the Critical Function section, the tab How to Cope is the section where you can start to proactively think of issues that might impact your area.

The software will prompt you to answer questions in order to get a better understanding of the needed resources.
